SECTION 1

INTRODUCTION

About Code Colonies

Everything Under One Global Capability Centre

Code Colonies Private Limited is a Global Capability Centre headquartered in Ahmedabad, India. Startups, MSMEs and enterprises use us as their own capability centre for consulting, technology and AI.

We run three divisions and our own platforms. Our teams build AI systems and custom software, deploy them inside the client's business, and keep them compliant. All work follows one rule: you pay for accepted outcomes.

Global Delivery

Offshore, nearshore and hybrid teams, shaped to what you need.

One Roof

Consulting, software, AI and commerce, with one accountable team.

Partnership Driven

We work as an extended arm of your team, and you pay after you accept the work.

Security and Compliance

DPDP, GDPR, HIPAA, PCI DSS and EU AI Act built into how we work.

How We Are Built

One GCC. Three Divisions. Our Own Platforms. One Delivery Standard.

The Promise

Consulting | Technology | Execution. This is what every client can draw on, in any mix.

The Divisions

Consulting, Technology and AI. Each division owns its kind of work and its own people, and all three work together for the client.

The Platforms

TrustOS for DPDP compliance, Synerger for consulting and deal management, ShopenUp for e-commerce, AksharAI for intelligent applications and ServeOS for restaurants and cloud kitchens.

The Delivery Layer

Every division delivers through three engagement models, O2E, FDE and The Startup Engine, under our delivery brand 2good.dev. You pay after you accept the work.

SECTION 2

CONSULTING DIVISION

Consulting Division

Strategy, Deals and Advisory

M&A and Deal Advisory

Deal sourcing, target screening and investment readiness. Valuation and commercial due diligence. Deal structuring across equity, debt and venture capital. Post merger integration.

Business and Management Consulting

Growth, expansion and market entry strategy. Process improvement, restructuring and HR transformation. Leadership, change and governance advisory.

IT and Digital Transformation

Transformation roadmaps tied to business strategy. ERP and CRM selection and rollout. Automation and AI adoption. Cloud, data and decision systems.

Financial and Risk Advisory

Corporate finance, capital budgeting and debt restructuring. Risk, governance and compliance frameworks. Tax and regulatory planning. Forensic accounting and turnaround work.

Compliance and Data Protection Advisory

Regulatory Confidence for Digital Products and AI Systems

Digital products and AI systems now carry real regulatory weight. We help teams find which laws apply to them, close the gaps, and stay compliant as they grow. We deliver the software and the compliance documentation together.

Privacy and Data Protection

DPDP Act 2023, GDPR, UK GDPR and CCPA. Applicability analysis, gap assessment, policies and working processes.

Health and Regulated Products

HIPAA applicability. Medical device risk under FDA and EU MDR. Compliance design for health apps.

AI Governance

EU AI Act classification and obligations, ISO 42001 readiness and NIST AI RMF. AI use policies and risk registers.

Security and Payments

PCI DSS for payment systems, NIST control mapping, security reviews and audit evidence.

How we engage: a short assessment first, then a design and documentation phase, then an optional advisory retainer. Legal review runs with your legal team, so the advice holds up in practice.

TrustOS

Our DPDP Act Compliance Platform

TrustOS brings DPDP Act compliance into one place, from consent and rights requests to breach response and audit evidence. It serves any company in India that handles personal data, including US and global companies operating in India.

Market timing

- **November 2026**
Consent manager rules start
- **May 2027**
Full compliance is due

Consent Management

Notices, consent capture and withdrawal, in line with the DPDP Act and its rules.

Data Principal Rights

Access, correction and erasure requests, tracked to closure within timelines.

Breach Response

Incident logging, assessment and notification workflows.

Audit Evidence

Records, reports and evidence ready for review by the Board.

Synerger

Our Consulting and Deal Management Platform

Synerger gives our consultants and our clients one place to manage engagements and transactions, from the first call to the closed deal.

Deal Management

Deal pipeline, target screening, due diligence workspaces and document rooms for transactions.

Engagement Management

Project tracking, milestone reporting and structured deliverables for consulting work.

Knowledge and Frameworks

Valuation models, diligence checklists, BRD and SRS frameworks and playbooks built from real transactions.

SECTION 3

TECHNOLOGY DIVISION

Technology Division: What We Do

We Build Software That Businesses Run On

01 Custom Software and SaaS

Custom software, SaaS platforms, enterprise systems and legacy modernisation, built to scale from the first release.

02 Web and Mobile Applications

Web applications, iOS and Android apps, APIs and microservices, with UI and UX design.

03 E-Commerce Engineering

Stores, marketplaces and headless commerce on ShopenUp, Shopify, WooCommerce and Magento.

04 Cloud and DevOps

Cloud setup and migration, CI and CD pipelines, containers, monitoring and cost control on AWS, Google Cloud and Azure.

05 Dedicated and Forward Deployed Teams

Full stack developers, project teams and forward deployed engineers, with CTO as a Service for growing companies.

06 QA and Security

Testing, penetration testing, DevSecOps and compliance work across GDPR, HIPAA and PCI DSS.

Tech Stack

The Stack We Actually Work In

Frontend

React, Next.js, Vue, Angular,
TypeScript, Tailwind

Backend

Node.js, Python, FastAPI,
NestJS, REST and GraphQL

Mobile

React Native, Flutter, Swift,
Kotlin

AI Models

Anthropic Claude, OpenAI,
Google Gemini, open weight
models such as Llama, Qwen
and Mistral

Agents and RAG

LangGraph, Claude Agent
SDK, OpenAI Agents SDK,
MCP, LlamaIndex, pgvector,
Qdrant

Data

PostgreSQL, MySQL, MongoDB,
Redis, Microsoft Fabric,
Databricks, dbt, Airflow

Cloud and DevOps

AWS, Google Cloud, Azure,
Azure AI Foundry, AWS
Bedrock, Vertex AI, Docker,
Kubernetes, Vercel

Commerce and Payments

ShopenUp, Shopify,
WooCommerce, Magento,
Stripe, PayPal, Razorpay, UPI

ShopenUp

Our Enterprise E-Commerce Platform

ShopenUp powers standard storefronts and fully headless builds, for our clients and for the commerce work our technology division delivers.

Storefront and Design

Mobile first themes, live preview, custom CSS and JS, SEO ready structure, and headless APIs for custom frontends.

Product and Inventory

Unlimited listings with variants, multi warehouse management, digital and subscription products.

Payments and Checkout

UPI, wallets and BNPL built in. Abandoned cart recovery. Multi currency checkout.

Marketing and Analytics

Email campaigns, loyalty programs, Instagram, Facebook and WhatsApp plugins, live dashboards.

Security and Uptime

PCI DSS, SSL, GDPR and Indian IT Act ready, hosted on AWS.

Who Uses It

Startups, SMBs, enterprises, agencies and global brands. A white label reseller platform is available.

SECTION 4

AI DIVISION

AI Services

What the AI Division Delivers, for MSMEs and Enterprises

AI Agents and Automation

Agents that handle orders, invoices, support tickets, approvals and reports.

Machine Learning Models

Forecasting, scoring, classification and computer vision.

Document Intelligence

Invoices, POs, KYC and contracts read and posted into Tally, ERP or CRM.

Private Knowledge Assistants

Answers from your own documents and data, kept inside your company.

Voice and WhatsApp Agents

Calls, bookings, reminders and order status in Hindi, Gujarati and English.

AI Inside Your Products

Copilots, smart search and MCP connectors in your apps, ERP or CRM.

AI Governance and Security

AI policies, EU AI Act and ISO 42001 readiness, and red team testing.

Managed AI Operations

Monitoring, quality checks, cost control and updates, with an SLA.

How We Deliver AI

Four Steps, One Accountable Pod

STEP 1

Assess

2 to 3 weeks, fixed fee. Use cases, costs and expected returns.

STEP 2

Pilot

4 to 6 weeks. Paid only after you accept it.

STEP 3

Production

Rollout into your systems, data and teams.

STEP 4

Managed Operations

Monitoring, quality and cost control on a monthly plan.

The delivery pod

One Forward Deployed Strategist for the client, the process and the results. Two Forward Deployed Engineers to build and deploy. QA shared across pods.

Platforms we build on

Anthropic Claude, OpenAI, Google Gemini and open weight models, on Azure AI Foundry, AWS Bedrock, Google Vertex AI or your own servers.

AksharAI

Our AI Platform and Intelligent Application Builder

AI App Builder

Low code and no code builder for intelligent applications. Natural language to logic, modular AI components, flows, triggers and real time collaboration.

AI Agents and Copilots

Copilots for sales, legal, HR, finance and research. Support automation and task handlers across web, mobile, chat and voice.

Deployment Options

SaaS hosted, secure private cloud, on premise and white label.

Industries Served

Healthcare, BFSI, Manufacturing, Retail, Logistics, Education and SaaS.

SECTION 5

EXECUTION AND ENGAGEMENT MODELS

Execution: 2good.dev

Our Delivery Brand. You Pay After You Accept.

2good.

Execution is the set of rules every division delivers under, and 2good.dev is the brand that carries those rules. You define the work, we build it, you review it, and you pay after you accept it.

No Advance Risk

Payment comes after review and acceptance. There is no advance.

Objective Acceptance

A signed specification defines completion, so acceptance stays objective for both sides.

Quality Included

Senior tech review, QA and project management come with every engagement at no extra cost.

Engagement Models

Three Ways to Work With Us

Three models. Each fits a different situation. All follow the same delivery rules.

O2E

Output Oriented Engagement

Work in fixed capacity blocks. Pay after review and acceptance. Fits defined scopes and teams that want zero delivery risk.

FDE

Forward Deployed Engineering

Forward deployed engineers and strategists inside your team and systems, shipping production outcomes from the first week. Fits AI adoption and complex integration work.

TSE

The Startup Engine

An execution partnership for startups. We share outcomes and align through equity. Fits founders who want a hands on execution partner.

O2E: Output Oriented Engagement

You Pay After You Accept the Work

How It Works

01

Work is arranged in fixed capacity blocks. Each block includes senior technical review, QA and project management. You pay only after you review and accept the output.

Governed by Documents

02

Every engagement follows one chain: business discovery, business requirements, then a signed technical specification. The specification decides acceptance, so completion means the same thing to both sides.

What You Get

03

Predictable capacity with no advance payment. Senior review on every deliverable. A clean paper trail from the first call to the final invoice.

FDE: Forward Deployed Engineering

Engineers and Strategists, Embedded Where the Work Is

What It Is

01

Forward deployed engineers (FDE) and strategists (FDS) work inside your team, your codebase and your systems. The strategist maps the problem and the result you need. The engineers build it, connect it and run it in production.

Where It Fits

02

AI agents and automation going into production. LLM and RAG systems. Enterprise integrations. Problems that are not fully defined yet, where the team shapes the solution with you.

Who We Send

03

Mid level and senior engineers and strategists with real production experience in agentic AI, enterprise systems and modern full stack work, matched to your domain.

TSE: The Startup Engine

Your Embedded Execution Partner for Startups

The Startup Engine is an operational partnership. We work across the functions of an early stage company as a co-founder and earn through shared outcomes and equity alignment.

01

Cost Efficient

Founders pay a small share of cost. Our upside comes from your success.

02

Deep Involvement

Product, engineering, operations and go to market, handled together.

03

Scalable Pods

Execution pods assigned by stage and need.

04

Integrated Planning

Sprints, product management, milestones and retrospectives.

05

Eight Lifecycle Phases

Ideation, Validation, Launch, Growth, Pivot, Turnaround, Expansion and Exit. We can join at any phase.

SECTION 6

TALENT DEVELOPMENT

On the Job Training

We Build Our Own Talent

Tracks We Run

01

Forward Deployed Engineer. Forward Deployed Strategist. Full Stack AI Engineering. Custom Software Development. Consulting.

How It Works

02

500 hours with a structured weekly curriculum, annotated code libraries, lab work, troubleshooting drills and real project briefs. Trainees work on real problems from the first week and join client teams only after they clear our delivery bar.

Why It Matters to You

03

Everyone on your project was trained, tested and mentored inside our own system, to the same standard, with clear accountability to you.

Forward Deployed Professional

Our On the Job Training Program for the AI Era, by AksharAI

Open to people from tech and non-tech backgrounds. Engineers also learn business and client skills. Strategists also learn to build with AI coding tools. It can be done alongside a job or studies through the part time route.

500 Hours

3 months full time or 6 months part time. Fully remote.

Two Tracks

Forward Deployed Engineer for the tech side. Forward Deployed Strategist for the business side.

Live Projects

Real work with real deadlines, mentored by experienced working professionals.

Certificate

Forward Deployed Professional Certificate, with the track named on it.

Roles it prepares for

★ Deployment Lead

★ AI Solutions Consultant

★ AI Implementation Specialist

★ Solutions Engineer

★ Solutions Architect

★ AI Product Manager

SECTION 7

REACH AND RESULTS

Client Presence and Reach

Where Our Clients Are and the Sectors We Serve

INDUSTRIES SERVED

SaaS and Tech, Retail and D2C, BFSI, Manufacturing, HealthTech, Education, Fintech, Logistics, Real Estate, Government, Media, Automotive, Energy, Agritech, LegalTech, InsurTech, Cybersecurity, Gaming, Travel and Fashion.

India

Enterprise, MSME and startup clients across sectors.

North America

US and Canada enterprise and startup clients.

UK and Europe

SME technology partnerships.

Middle East

Growing presence across the Gulf.

Client Success Metrics

One Group. Measured Outcomes.

50+

Clients across four global regions.

20+

Consultants and engineers.

90%

Client retention rate.

82%

Projects delivered on time.

97%

SLA compliance on bug resolution.

100%

MVP launch success rate.

4.5 years

Average team experience.

20

Sectors served.

What Sets Us Apart

The Right Partner Makes the Difference

Everything Under One Roof

Consulting, design, development, AI and DevOps in one centre, handled by one accountable team.

Forward Deployed Model

Engineers and strategists who work inside your team and run what they build.

Proven Track Record

Platforms delivered for fintech, healthcare, logistics and more, from startups to enterprises.

Trained In House

Every person on your project comes through our own On the Job Training system, vetted and accountable.

Pay After Acceptance

With O2E you pay after you accept the work. The delivery risk sits with us.

Compliance Built In

DPDP, GDPR, HIPAA, PCI DSS and EU AI Act, built in from day one.

Transparent Process

Weekly sprints, live reporting and direct access to the team.

Product Thinking

We ask why, challenge assumptions and build the smarter version of what you asked for.

LET'S WORK TOGETHER

Thank You.

One Capability Centre. One Standard.
One Partner for Growth.
